

GET CLOSER TO THE EDGE. SEE EVERYTHING HAPPENING. IN REAL-TIME.

ThingTech Field Service Solutions

As a company managing field workers, we know that your success depends on doing more with less. The Internet of Things (IoT) has changed business. And it has redefined how you deliver services and adapt to demand, market changes and competitors. ThingTech can help you stay connected to the edge of your organization where operational data is generated. We'll work together with you to empower field workers with a simple and intuitive application built on our end-to-end IoT platform.

ThingTech Field Service solutions can provide:

- **Real-time visibility.** Get alerts when drivers are speeding, idling, off-schedule, and enter or exit a geo-fence.
- **Increase productivity.** Monitor routes, mileage, and time spent on each work order to identify where you can improve.
- **Real-time route planning.** Give your workers the most efficient routes to, between, and from job locations.
- **Work order optimization.** Streamline the assignment and status of work orders to achieve real-time visibility.
- **Job scheduling.** Leverage ThingTech to identify the closest or best available worker to a job location.
- **Enhanced dispatching.** Streamline operations by efficiently assigning the right job to the right worker.
